## SAC-D Service Platform is presently in good health and operating normally

### Issues to report briefly

- Star Tracker and Attitude Control – Resolved
  - Frequent safe-hold anomalies in 2012; some data loss
  - Usually quarter moon disruption of star tracker performance
  - Resolved with adjustment to certain star tracker settings
  - No anomalies since July 2013
- Cold Sky Calibrations
- RTU1B (Power supply Side B for Attitude Control System)
  - Spontaneously powered off 12 Sep 2013; not responding
  - Switch to Side A was automatic; no disruption.
  - Investigation underway

### Issues to report briefly

- Star Tracker and Attitude Control – Resolved
  - Frequent safe-hold anomalies in 2012; some data loss
  - Usually quarter moon disruption of star tracker performance
  - Resolved with adjustment to certain star tracker settings
  - No anomalies since July 2013
- Cold Sky Calibrations
- RTU1B (Power supply Side B for Attitude Control System)
  - Spontaneously powered off 12 Sep 2013; not responding
  - Switch to Side A was automatic; no disruption.
  - Investigation underway

- **Version 1:** (Sep 2011) Initial calibration, but showed a calibration drift in the following months
- **Version 1.3:** (Apr 2012) Deflection Ratio (DR) calibration algorithm corrected drift and some variations, but left residual quasi-monthly oscillations.
- **Version 2.0:** (Feb 2013) Current operational version. Pointing correction applied. Empirical calibration method corrected quasi monthly oscillations. SSS errors are primarily seasonal residuals of the galaxy correction.
- **Version 3.0:** (Jan 2014) Corrects galaxy residual error. Improved wind roughness correction. Updated data quality flags. Reduced warm and cold end calibration biases. Next key problem is RFI.
- **Version 4.0** (TBD 2014) Add MWR rain correction. Address RFI (somehow). Improve L3 gridding algorithms (resolution, de-biasing, ...), other updates.

Timeline bar-graph (Launch, Aq-on, 1<sup>st</sup>-light, PLAR, BOPM, 1yr, 2yr, now, 3yr, EOPM, 10-month Ext, Sr Rev Proposal, Start 2yr Ext Mission).

Issues and plans: next Science Team; EOPM assessment; Ext Mission

8<sup>th</sup> Aquarius/SAC-D Science Meeting proposal in Mar-Apr 2015.  
Buenos Aires, 12-14 November 2013

- Animation
- Project status (2) from Gene
  - Month, week & day most recent Kuring maps
  - Kuring maps Jul & Nov 2012
  - Highlight data loss stats
  - AOCS issues solved
- Timeline bar-graph (Launch, Aq-on, 1<sup>st</sup>-light, PLAR, BOPM, 1yr, 2yr, now, 3yr, EOPM, 10-month Ext, Sr Rev Proposal, Start 2yr Ext Mission.
  - Issues and plans: next Science Team; EOPM assessment; Ext Mission proposal in Mar-Apr 2015.
- Cold-Sky Cals
- Timeline: Algorithm versions
  - Key improvements V1.3, V2.0, V3.0
  - V2 solved Qusai monthly oscillations
  - V3 solves (mostly) seasonal errors due to galaxy; some residual
- Analyses of V2.5.1 (V3.0 precursor) – 4-5 slides from Oleg & HsunYing
- 2-years of data; some science highlights
  - TIWs; Hurricane Ivan; GOM(gierach, refer to later talk)
  - BAMS SOC 2012
  - Prelims from V2 & V2.5.1: yr2-1, spit itcz, amazon-orinoco outflow; Atl spit ITCZ?
  - Advances in gridding (Olegs paper for SPURS)
  - Gordon Giulivi SPURS analyses
  - EOFs V2 vs V2.5.1
- Wrap-up\_ some key issues for meeting to be discussed at end of day.
